JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 171 1952

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys: In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order; for example, all references to nickel–chromium–molybdenum steel will be found under the heading " Chromium–molybdenum–nickel steel ". In the indexing of other alloys, carbon and iron, when present, are included in the title; iron when present is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples: " Iron–silicon–carbon alloys " and " Iron–chromium–nickel–carbon alloys."]

Absorptiometric Analysis, determination of iron in ores, slags, and refractories, 403 (*Appendix*); by Spekker, 212; infra-red, 213

Adhesion, enamels to cast iron, 204; Redux to metals, 109

Ageing, correlation with precipitation, 209; effect of cooling rate, 113; quench, 333; strain, of steel wire, 202; thermodynamics, 333

Air, filtration for motor rooms, 329

Air Research Manufacturing Co., finishing aircraft parts, 204

Aircraft Parts, bonding with Redux, 109; die casting, 324; electroplating specifications, 204; finishing, 204; investment casting, 324; flaw detection by magnetics, 437; pressing by Hydroform process, 327; stainless steel, forming, 336

Aircraft Steel, welding, 330

Alcohol, corrosion of cast iron and steel in, 212; corrosion resistance of high-silicon iron in, 212; corrosion resistance of stainless steel in, 212

Algoma Steel Corp., sintering at Helen mine, 195

Allis Chalmers Manufacturing Co., precision casting heat-resistant alloys, 200

Alloy Phases, epsilon, in Fe–Mn, 137 (*Paper*); eutectic transformation, 209; in five-component systems, 339; order–disorder transitions, 209; transformations, 209

Alloy Steel, 438; analysis by spectroscopy, 115; austenite transformations, 114; automobile, 208; case-hardening, 336, 439; codes, 445; conservation in Czechoslovakia, 208; corrosion-resistant, 115; determination of molybdenum in tungsten-containing, 75 (*Paper*); determination of vanadium in, 81 (*Paper*); Double Seven, 335; Double Six, 336; electric-furnace heats computation, 426; etching medium, 439; French designations, 439; hardenability testing, 205; heat-treated, effects of elements, 438; Indian industry, 444; low-carbon, data, 335; machinability, 203; phosphorus and arsenic segregation, 114; plates data, 335; production, 208; rolling, effects of elements, 328; segregates homogenization, 114; substitution of, 335; temper brittleness, 205;

Alloy Steel—*continued*
Tormanc Special, 208; transformations in, 339; transformations on cooling, 440; transformations diagrams, 338; XCR, microstructural changes in, 229 (*Paper*)

Alloy Structure, 213 (*Book*); changes in high-alloy valve steel XCR, 229 (*Paper*); effect on plasticity, 332; superlattice formation, 338

Alloy Thermodynamics, 214 (*Book*)

Alloys, aluminium–silicon solidification, 325; chromium–cobalt–molybdenum phases, 339; chromium–cobalt–nickel phases, 339; chromium–molybdenum–nickel phases, 339; iron–aluminium, order–disorder effects in, 372 (*Paper*); iron–aluminium superlattice formation, 338; iron–aluminium–copper–nickel electron-microscope study, 114; iron–aluminium–nickel β and β' phase transformations, 41 (*Paper*); iron–aluminium–nickel, structure for permanent magnets, 206; iron–antimony–phosphorus phase diagram, 441; iron–carbon austenite transformation, 114; iron–carbon liquid, nitrogen absorption, 334; iron–carbon martensite transformation, 114; iron–chromium, effect of vacuum fusion, 208; iron–chromium gamma-loop studies, 210; iron–chromium liquid, nitrogen absorption, 334; iron–chromium oxygen reactions, 441; iron–chromium–cobalt phases, 339; iron–chromium–manganese α–γ transformation, 114; iron–chromium–nickel constitution at 550°–800° C., 345 (*Paper*); iron–chromium–titanium gamma-loop studies, 210; iron–manganese, carbon solubility in, 210; iron–manganese, epsilon phase X-ray study, 137 (*Paper*); iron–manganese liquid, nitrogen absorption, 334; iron–nickel, effect of nickel on Ar_3 point, 338; iron–nickel, gamma–alpha transformation, 338; iron–nickel liquid, nitrogen absorption, 334; iron–nickel metallurgy, 111; iron–nickel recrystallization, 114; iron – phosphorus, 339; iron–platinum, 339; iron–platinum thermal expansion, 333; iron–silicon, carbon solubility in, 210; iron–silicon, heat-treatment in magnetic field, 206; iron–silicon liquid, nitrogen absorption by, 334; iron–silicon magnetic properties, 206; iron–silicon–carbon carbide phase, 74

Alloys—*continued*
(*Correspondence*); iron–silicon–carbon liquid, e.m.f., 335; iron–titanium γ-loop studies, 210; lead–tin coatings solderability, 432; tin–zinc coating for bolts, 115; tin–zinc plating-bath composition, 432

Alpine Montangesellschaft, bloom and slab shear, 330

Alumina, determination in blast-furnace slags, 340

Aluminium, corrosion protection of bolts in, 115; deoxidation of hypo-eutectoid steel by, 59; welding by shielded arc, 108

Aluminium–Silicon Alloys, solidification, 325

American Foundrymen's Society, chill test, 324

American Naval Research Laboratory, mould wash, 323

American Steel and Wire Co., open-hearth roofs, 317

American Wheelabrator Equipment Co., foundry dust-control system, 201

Analysis, 115, 212, 340, 443; absorptiometric determination of iron in ores, slags, and refractories, 403 (*Appendix*); absorptiometric by infra-red, 213; absorptiometric by Spekker, 212; colorimetric determination of titanium, 116; colorimetric determination of titanium in presence of vanadium, 212; infra-red, of gas, 213; micro, of iron and steel, 443; photometric determination of copper, 443; photometric instruments, 443; polarographic, 115; polarographic amino-acid study, 213; polarographic determination of Ni, Pb, and C, 443; polarographic determination of U, Fe, Ni, and Mn, 443; polarographic principles, 443; potentiometric determination of chromium and vanadium, 443; potentiometric determination of manganese, 341; potentiometric end-point burette, 341; spectrochemical electron-tube apparatus, 115; spectrochemical, of slags, 115; spectrographic, of cast iron, 115; spectrographic determination of slag lime/silica ratio, 340; spectrographic determination of magnesium in cast iron, 443; spectrographic, hollow cathodes, 443; spectrographic, in steelworks, 115; spectrophotometric determination of silicon in Zr, Be, Al, and Ca, 443; spectrophotometric in-

Analysis—*continued*
strument, 212; spectroscopic, of alloy steels, 115
Analysis of, alloy steel by spectroscopy, 115; blast-furnace slags, 340; cast iron by spectrography, 212; flue gas, 116; gas, 116; gas, absorbing vessel, 341; refractories by spectrography, 444; slags and ores by spectrography, 444; slags by spectrochemistry, 115, 444; waste gases, 341
Analysis Methods, organic reagents in, 116; quantitative inorganic, 343 (*Book*)
Annealing, effect on corrosion resistance of galvanized steel, 121 (*Paper*); effect on grain orientation, 206; grey iron, 202; heating and holding times, 105; low-temperature, effect on creep, 207; magnetic saturation during, 435; recrystallization in, 338; soft, of bearing steels, 202; under weights, 106; from working temperature, 202
Annealing Furnaces, at Abbey and Trostre, 327; bright, 327; coil, 327; continuous, for tinplate, 428
Appleby-Frodingham Steel Co., pickling and priming plant, 254
Arc Furnaces. *See* Electric Furnaces
Arc Welding. *See* Welding
Architecture, factory design, 215 (*Book*); at Margam, Abbey, and Trostre works, 319; structure in building, 446 (*Book*)
Armco Steel Corp., electric-furnace relining, 103; forming stainless steel, 336; iron ore in open-hearths, 320; open-hearth charging practice, 319; scrap-charging hoist, 103
Arsenic, segregation in alloy steels, 114
Austenite, carbon diffusion in, effect of cobalt, 208; carbon diffusion in, effect of nickel, 339; cementite solution in, 209; grain-boundary migration, 338; grain-size determination, 337; grain structure in forgings, 440; saturated, 339; transformation, 114, 441; transformation in alloy steels, 114; transformation to martensite, 114
Australia, blast-furnace construction at Port Kembla, 102; refractory clays, 102; seamless-tube production, 328; standardization, 336; war-time activities at Broken Hill, 318
Austria, Mur hematite, 195; standardization, 336
Automatic Control, 445
Automobile Industry, alloy-steel standardization in France, 208
Automobile Parts, chassis-member stresses, 112; connecting-rod fracture, 434; crankshaft forging, 106; crankshafts, cast-iron, 337; cylinder castings, 322; forging plant, 106; hardening by dry cyaniding, 428; piston-ring study, 335

Baker (John) and Bessemer, Ltd., automatic coal feeding in gas producers, 315
Bearings, ball, defects study, 335; ball in sheet and wire thickness gauges, 329; load-carrying calculation, 203; plastic, 108, 330; steel, annealing, 202; stepped-film lubrication, 330
Belgium, electrotinning line, 111; ultrasonic testing, 436
Bend Tests, micro, 205; on needles, 433; reproducibility for hard steels, 205
Benzole, washing with tar oils, 425
Bessemer Converter. *See* Converters
Bessemer Process, air movement in, 199; basic, use of oxygen and CO_2 in final stage, 199; oxygen-enriched air in, 199, 318, 426; work of R. F. Mushet, 341
Bessemer Steel, defects removal in rolling, 328; determination of phosphorus by visual method, 339; first rail, 341; grain-size, effect of converter size, 323; low-nitrogen production, 199; low-nitrogen low-phosphorus production, 199, 426; PN, 426
Bethlehem Steel Co., lubrication of plant, 330; open-hearth availability increasing, 319
Bibliography, scientific and technological, 448 (*Book*)
Bicycles, chain heat-treatment, 326; chain stress/strain, 331; chain tensile failure, 434
Biographies, *frontispiece*, also to face 120, 216, 344; contributors to *Journal*, 98, 190, 310
Birmingham University, metallurgy at, 117
Bismuth Alloys, resistance of chromium steel to corrosion by, 340
Blast-Furnace, 102, 198, 317, 425; carbon linings, 425; comparison with electric smelting furnaces, 426; construction at Port Kembla, 102; demolition, 318; design developments, 317; early use of cast iron for tops, 116; full-scale trials, 254 (*Correspondence*); high top-pressure operation, 318; low-shaft, 102; low-shaft international trials, 103; new, at Hoerde, 318; new, at Société John Cockerill, 425; rapid construction, 318
Blast-Furnace Coke, quality, 315; size grading, 196; testing, 315
Blast-Furnace Gas, cleaning-plant safety measures, 295; dust recording meter, 273

Oklahoma Steel Castings Co., oxygen practice in acid electric furnaces, 103
Ontario Research Foundation, controlled-density steel by direct reduction, 198, 426
Open-Hearth Furnace, acid and basic refractories, 197; acid, charge effect on production, 320; all-basic in Britain and Holland, 197; all-basic operation and control, 321; automatic control, 321; availability increasing at Bethlehem Steel Co., 319; availability increasing at Ford Motor Co., 319; basic ends, 319; bath-temperature measurement by immersion couple, 316; bottom refractories, 317; bottom skull crystallography, 426; box-type roof, 199; burners, 321; charging practice at Armco Steel Corp., 319; chrome–magnesite compared with silica brick, 425; cold-metal, refractories, 317; cooling-water, 320; copper contamination, 199; Crespi bottoms, 425; design for increased production, 320; design at Inland Steel Co., 320; design at Republic Steel Corp., 320; economic comparison with arc furnace, 321; effect of emissivity and flame length on heat transfer, 380 (*Paper*); firing with coke-oven gas, 199; flow

Open-Hearth Furnace—*continued*
patterns, 199, 320; foundations at Margam and Port Talbot, 318; heating-up time shortening, 199; high-pressure gas in, 314; jet tapping, 321; new, at Jones and Laughlin's, 198, 321; oxygen in, 103, 319; personnel relationships, 213; port-end design, 199; refractories, 197, 317, 319; refractories-life increasing, 199; roof refractories, 317; scrap-charging hoist, 103; scrap cutting, 320, 431; top charging, 321; waste-gas analysis, 341; zebra-type roofs, 317, 319
Open-Hearth Models, flow visualization in, 86 (*Letter*)
Open-Hearth Process, acid, advantages, 320; acid, vanadium in, 321; cupola in, 320; effect of low-manganese pig, 319; iron ore in cold-metal heats, 320; mixer linings, 317; production increasing, 320; production increasing at Inland Steel Co., 319; production increasing at Kaiser Steel Corp., 319; production increasing at United States Steel Co., 319; scrap preparation, 320; sulphur pick-up study by radio-isotopes, 199
Open-Hearth Slag, basicity determination by electrical conductance, 199; determination of calcium and magnesium in, 340; determination of phosphates in, 340
Ore Deposits, Luxembourg, 423; Trans-Jordan, 195; Venezuela, 195
Ores, agglomeration, 195; beneficiation by electrostatics, 423; crushing, 101; determination of iron in, 392 (*Paper*); flotation studies, 313, 423; mining and treatment, 195, 313, 423; separation by cyclones, 101; separation by electrostatics, 195
Osborn Foundry and Engineering Co., foundry re-organization, 201
Overheating, transformation in, 440
Oxidation, iron in oxygen, 115
Oxy-Acetylene Flames, in pipemaking, 109
Oxygen, 118 (*Book*); admixture with CO_2 in Bessemer process, 199; corrosion mechanism, 441; determination in ferrous metals, 341; determination in gas by magnetics, 443; determination by magnetics and recorders, 116; determination in manganese oxides, 341; determination in presence of nitrogen, 116; equilibria with phosphorus in liquid iron, 404 (*Paper*); iron affinity for, 441; iron ore as source in electric furnace, 103; in open-hearth, 103, 319; oxidation of iron in, 115; in producer-gas enrichment, 103
Oxygen-Enriched Air, in converter, 199, 318; in cupola, 322
Oxygen Lancing, in electric furnace, 103

Painting, chromium plate, 204; preparation of test panels for, 203
Paints, in cathodic protection, 211; red-lead protective, 211; stripping from corrosion-test specimens, 271 (*Appendix*); for structural steelwork, 204; zinc and cadmium chromates as corrosion inhibitors, 111
Parsons and Co., Ltd., heavy castings, 201
Patternmaking, for die castings, 324
Patton Manufacturing Co., heat-treating, 326
Pearlite, decomposition, 339; formation mechanism, 338; transformations, 441
Periodic System, metals in, 432
Permanent Magnets, materials and applications, 435
Personnel, accident prevention in iron and steel works, 290 (*Paper*); eye safety in foundry, 325; foundry safety, 202; health hazards in finishing, 117, 432; ironworks safety, 117; job evaluation, 117; open-hearth, 213; psychology of
Personnel—*continued*
colour, 445; supervision, 445; training, 445; technical training, 213
Peru, projected steelworks, 318
Phase-Contrast Microscope, in metallography, 439
Phenols, determination in coke-oven gas, 444
Phosphate Coatings, 204; for cold extrusion, 328; corrosion of steel surfaces by retained treatment chemicals, 58 (*Correspondence*); in electroplating, 110; plant for, 254; zinc, for cold extrusion, 328
Phosphoric Acid, corrosion testing, 212
Phosphorus, determination in Bessemer steelmaking, 339; determination in coal and coke, 444; effect in nodular iron, 337; equilibria with oxygen in liquid iron, 404 (*Paper*); reactions with basic steelmaking slags, 426; segregation in alloy steels, 114
Photoelastic Analysis, stress-freezing technique, 112
Photoelectric Cells, 329
Photometric Analysis, determination of copper, 443; instruments, 443
Photomicrography, technique, 439
Physics, reports on progress, 447 (*Book*)
Pickling, 109, 119 (*Book*), 203, 431; bars, 109; inhibitors, 110, 431; inhibitors action, 431; plant, 254; plant materials, 109; spray, for porcelain enamelling, 110; stainless sheet, 110; strip-loop height control, 109; trioxide, for porcelain enamelling, 110; at Trostre works, 329
Pickling Liquor, waste, treatment, 110
Pig-Casting Machines, effect on foundry iron, 427
Pig Iron, "bauxite" production, 337; early production, 116; early refining in England, 116; foundry machine-cast, 427; low-manganese, effect in open-hearth, 319; production, 102, 198, 317, 425; production in electric furnace, 102, 426; production in low-shaft furnace, 102
Pipelines, buried, protection by coal-tar enamels, 204; cathodic protection, 442; laying considerations, 442; steam, creep in, 207; stray current, 442; weld gamma radiography, 430; welded, corrosion cracking, 212
Pipes, boiler plate for, 336; centrifugal casting, 324; creep-resisting, effect of cold drawing, 334; drawn, residual stress, 336; insulated, heat losses, 198; oxy-acetylene flames in fabrication, 109; pressure, developments, 336; welded, magnetic testing, 109; wrought iron for, 318
Piston Rings, study, 335
Pittsburgh Steel Foundry Corp., ore practice in acid electric furnace, 104
Plasticity, in binary alloys, 332; crystal, 433; structure dislocation, 332; study by X-rays, 333
Plastics, bearings, 108, 330; porous castings repair by, 201; sprayed coatings, 204
Poland, castings-defects classifications, 325
Polarographic Analysis, amino-acid study, 213; determination of Ni, Pb, and Cr, 443; determination of U, Fe, Ni, and Mn, 443; principles, 443
Polishing, abrasion, friction, and wear, 113; by abrasive belts, 109; electrolytic. *See* Electrolytic Polishing
Potassium Dichromate, as corrosion inhibitor in presence of HCl, 442
Potentiometric Analysis, determination of chromium and vanadium, 443; determination of manganese in ferro-vanadium, 341; end-point burette, 341
Powder Metallurgy, 111; cobalt-amalgam magnetic properties, 435; cold-welding study, 111; diffusion in sintering, 210; electroplating parts, 204; iron-amalgam magnetic properties, 435; nickel steel, 111; parts production, 111; treatise and bibliography, 342 (*Book*); tungsten carbide. *See* Tungsten Carbide; tungsten-powder production, 427
Powder Metallurgy—*continued*
Precision Casting, 201; gun parts, 324; lost-wax, 201; lost-wax, of aircraft parts, 324; lost-wax, of heat-resisting alloys, 200; at Precision Metalsmiths Inc., 324; processes, 324; at Watervliet Arsenal, 324
Precision Metalsmiths, Inc., investment casting, 324
Pressing, 106, 202, 327, 428; aircraft parts by Hydroform process, 327; electronic guard for presses, 107; Hydroform process, 327; Marforming, 107, 202, 327; mechanical-hand device, 327
Pressure Vessels, Cr–Mo caustic embrittlement, 434; corrosion failure, 210; flame cutting in fabrication, 109; steels creep and stress, 334; welding electrodes for, 331
Producer Gas, burners for flameless combustion, 101; from charcoal, 315; enthalpy, etc., diagrams, 315; in fireclay-brick firing, 102; oxygen enrichment, 103
Pyrometers, German standard definitions, 102; high-temperature, 196; immersion, 316; immersion compared with radiation, 315; immersion, in steel industry, 316; micro, for slags, 197; photographic, for surface temperatures, 102; radiation, 316; radiation compared with immersion, 315; suction, 316

Quality Control, in forging, 327; in steelmaking, 117, 198, 321
Quenching, effect on cast-iron graphitization, 324; ingots, residual stresses, 332; oil for, 428; from rolling heat, 438; salt-bath, 326; stepped, 428; stepped, with hot peening, 327

Radio-Active Isotopes, applications, 117; applications at Corby, 117; determination of Cr, V, and Mo by, 212; determination of sulphates in plating baths by, 212; in iron and steel industry, 117; in non-destructive testing, 333; sulphur pick-up study in open-hearth, 199; in wire-drawing die-wear study, 328
Radiography, cobalt, 207; cobalt, in foundry, 333; defects inspection by, 437; gamma, of pipeline welds, 430; micro, absorption, 114; molybdenum, in stress determination, 332; xero, 333
Rails, Bessemer steel, first, 341; history and development, 107; production, 107; rolling, 107; testing by supersonics, 436; tramway, build-up by welding, 331; tramway, thermit welding, 430; welding, 203
Railway Wagons, coal, report of service trials, 288 (*Correspondence*); wheels, solid-rolled, 107
Railways, flaw detection, 436
Recuperators, calculations for, 314; formulae, 424; heat exchange between fluids and tubes, 424; tube arrangement for, 314
Refractory Materials, 102, 197, 316, 425; analysis by spectrochemistry, 444; basic compared with silica, 317; basic, for electric furnaces, 197; bibliography, 342 (*Book*); clay thermal analysis, 197; clays of South Australia, 102; for copper-smelting furnaces, 102; cupola monolithic, 317; density determination, 102; determination of iron in, 392 (*Paper*); electric-furnace bottoms, 198; electric-furnace roofs, 198; electrical properties, 316; firebrick after-expansion, 197; firebrick/blast-furnace-slag reactions, 197; firebrick reheat testing, 197, 317; glazed coatings, 102; for ingot hot topping, 322;

Refractory Materials—*continued*
insulating, for furnaces, 425; insulating, properties, 198; insulating, thermal-conductivity measurement, 102; inter-reaction temperatures, 316; ladle, 317; for metal mixers, 317; mix composition for bricks, 316; open-hearth acid and basic, 197; open-hearth all-basic, 197; open-hearth basic ends and zebra roofs, 319; open-hearth bottoms, 317; open-hearth cold-metal-shop, 317; open-hearth life increasing, 199; oxides, emissivity determination, 316; for pouring runners, 197; "Refractolith," 425; reheat testing, 197; resistance to slag attack, 316; testing, 102, 197; testing at Abbey Works, 102; wetting by molten silicates, 316
Refractory Materials (Carbon), in blast-furnace, 425
Refractory Materials (Chrome-Magnesite), comparison with silica brick, 425; determination of Fe_2O_3 in, 341
Refractory Materials (Chromite), reaction with silicon carbide, 316
Refractory Materials (Dolomite), calcination kinetics, 316; Crespi open-hearth bottoms, 425; determination of calcium and magnesium in, 340; developments, 317
Refractory Materials (Fireclay), brick-firing kiln, 102
Refractory Materials (Magnesite), Breitenau deposits, 195; Pyrenees deposits, 195; determination of calcium and magnesium in, 340
Refractory Materials (Silica Brick), alternation with basic brick in open-hearth roofs, 317; comparison with basic bricks, 317; comparison with chrome-magnesite, 425; low-alumina, manufacture, 317; low-alumina properties, 317; low-alumina raw materials, 316; mineralogical changes, 197; reheat test, 317; "super-duty," for open-hearth roofs, 317
Refractory Materials (Silicon Carbide), properties, 198; reaction with chrome brick, 316
Reheating Furnaces, at Hadfields, Ltd., 325; skid-collar stud welding, 325
Republic Steel Corp., open-hearth design, 320; top-charged electric furnaces, 103; zebra open-hearth roofs, 317
Research, co-operative, 444; corrosion resistance, 115; creep, 207; friction and wear, 434; heat-treatment metallographic, 106; iron and steel, at I.R.S.I.D., 117; organization, 444; in steel industry, 213; steel-industry, economics, 213
Resins, repair of porous castings by, 201
Richardson (R. J.) and Sons, Ltd., shot blasting, 431
Rivets, comparison with high-strength bolts, 335
Rod, iron-powder, cold welding, 111
Rolled Sections, in U.S.A., 335
Rolling, 107, 202, 328, 429; alloy steels, effects of elements, 328; British and American practices compared, 87 (*Paper*); cold, output diagrams, 202; cold, with strip tension, 239 (*Paper*); cold, time formula, 202; continuous gauge control, 430; defects removal in, 328; deformation, 429; deformation resistance and power calculations, 328; early, of iron bars, 213; effect on grain orientation, 206; effect of roll size, 430; force and power measurements by strain gauges, 429; nodular iron, 337; plastic working, 446 (*Book*); power requirements, 328; pressure weldability in, 429; rails, 107; scale recovery, 107; sheet-thickness gauging, 329, 430; tee-sections, 429; temperature measurement and control, 196; time study, 429; at Trostre works, 329; tubes, 202; wheels, 107; wire-thickness gauging, 329
Rolling Mills, 107, 202, 328, 429; at Abbey Works, 329; bar, cooling beds, 183
Rolling Mills—*continued*
(*Discussion*); British compared with American, 87 (*Paper*); civil engineering at Abbey works, 319; coil furnaces, 430; cold-sheet, 107; cold-strip, 328; electrical control by magnetic amplifier, 108, 329; electrical controls, 202, 429; electrical-drive ratings, 107; electrical safety regulations, 296; gear lubrication, 108; ingot tippers, 430; at Krupp Grusonwerk, 430; load meter, 328; lubricants filtration, 108; lubrication, 330; at Orb Works, 329; roller-table drives, 430; site preparation at Abbey works, 329; at Trostre works, 329
Rolls, 328; cast-iron structure, 107; chill-cast, hardness predetermination, 434; effect of size in strip rolling, 430; tin-plate, preheating, 111; tungsten carbide, 328
Rubber Tyres, steel moulds for, 331
Ruhrgas A.G., gas production from pulverized coal, 425
Rumania, mineral resources, 313
Russia, cast-iron desulphurization, 322; electric-furnace design and practice, 321; iron and steel industry, 117, 341; sheet-iron production from liquid state, 201; surface-quality determinations, 203; welding in, 330
Rust, preventatives in electroplating, 110

St. Helena, manganese-ore deposits, 195
Sampling, automatic, of dust, 445; coal, 444; iron for carbon determinations, 116; lump materials, 444
Scaling, electrochemical prevention, 211; in iron, 115; iron at high temperatures, 340
Scrap, baling, 108; charging hoist, 103; copper and copper-alloy, 118 (*Book*); cutting for open-hearth, 431; preparation for open-hearth, 320; production of stainless steel from, 322, 426; swarf briquetting, 200, 322; swarf melting in cupola, 200, 322, 427; tool-steel, refining in electric furnace, 105; tungsten-steel, sorting, 444
Screws, wood, manufacture in South Africa, 445
Segregates, in forgings, 438; phosphorus and arsenic in alloy steels, 114
Selenium, addition to stainless steel, 208
Shafts, surface hardening, 326
Shanks (Alexander) and Son, Ltd., diesel-engine castings, 201
Shearing, blooms and slabs, 330; drive motors, 330
Sheet, iron, production from liquid state, 201; strain in drawing, 328; thickness gauging in rolling, 329; titanium, 327
Sheet Steel, coatings drying, 432; deep-drawing, 439; electrical, 329; folds determination, 435; thickness gauging by magnetics, 108
Sheffield Steel Corp., scrap preparation, 320
Shells, forging, 328
Ships, plate notch resistance of welded and unwelded, 112
Shot Blasting, airless, 204; development, 431; laboratory tests, 431; Wheelabrator-unit drive, 109
Shot Peening, effect on fatigue strength, 332; hot, with stepped quenching, 327
Sigma Phase, in chromium alloys, 339; in high chromium–nickel steel, 49 (*Paper*); in Fe–Ni–Cr alloys at 550°–800° C., 345 (*Paper*)
Silica, determination in iron ore, 340; determination in slags, 444; determination in slags and rocks, 340; transformations study by X-rays, 197
Silicomanganese, determination of manganese in, 340
Silicon, deoxidation of electric steel by, 104; determination in chromium steels, 341; determination in iron and steel, 340; determination in presence
Silicon—*continued*
of Zr, Be, Al, and Ca, 443; effect in nodular iron, 337
Silicon Carbide, new type (SiC VIII), 316; reaction with chrome brick, 316; refractory properties, 198
Silicosis, causes and treatment, 342
Sintering, developments, 196; experiments and practice, 423; at Helen mine, 195
Sintering Plant, developments, 196
Slag Wool, 426
Slags, analysis by spectrochemistry, 115; analysis by spectrography, 444; basic, reactions with iron and cobalt, 198; basic steelmaking, equilibria, 426; blast-furnace, analysis, 340; blast-furnace, determination of alumina in, 340; blast-furnace, reactions with firebrick, 197; blast-furnace, utilization in cement making, 198; blast-furnace, utilization in glass making, 426; blast-furnace, in wool form, 426; cement-making properties, 198; desulphurization of iron by, 321; determination of calcium and magnesium in, 340; determination of iron in, 392 (*Paper*); determination of lime/silica ratio by spectrography, 340; determination of silica in, 340, 444; electrical conductance as basicity index, 199; electrical conductance of FeO-containing, 104; equilibria computation, 104; equilibria thermodynamic calculation, 64 (*Paper*); manganese-containing, from spiegeleisen practice, 427; micropyrometer, 197; open-hearth, basicity determination by electrical conductance, 199; open-hearth, determination of Ca and Mg in, 340; open-hearth, determination of phosphates in, 340; refractories resistance to, 316; silicate, surface tension, 321; soda, dephosphorization of steel by, 128 (*Paper*); treatment and use, 198, 426
Smith and Wellstood, Ltd., foundry plant, 324
Soaking Pits, 325, 428; track time, 325
Société Anonyme Ougrée-Marihaye, low-shaft furnace trials, 103
Société d'Electro-Chimie d'Ugine, corrosion- and heat-resisting steels, 439
Société John Cockerill, blast-furnace plant, 425
Sodium Nitrite, as corrosion inhibitor, 211
Sodium Orthophosphate, corrosion inhibition by, 210
Solidification, of cast iron and alloys, 325; rate effect on ingot structure, 105; rate for rimming-steel ingots, 286 (*Appendix*)
South Africa, coke-oven plant at Iscor, 196
South African Iron and Steel Corp., history, 116
Southern Pacific Railroad Co., railways inspection, 436
Spain, mining and metallurgy at Vizcaya, 444
Special Steels, cost accountancy, 213; power-station, 208; quality control, 198
Specifications, preparation, 335; steel, in defence effort, 335
Spectrochemical Analysis, electron-tube instrument, 115; slag-standards preparation, 115
Spectrographic Analysis, cast iron, 212; determination of magnesium in cast iron, 443; determination of slag lime/silica ratio, 340; hollow cathodes, 443; in steelworks, 115
Spectrophotometric Analysis, determination of silicon in presence of Zr, Be, Al, and Ca, 443; instrument for, 212
Spectroscopic Analysis, of alloy steels, 115
Spiegeleisen, manganese recovery from slags, 427
Sponge Iron, process in Sweden, 103
Spraying, metal, metallurgy, 204; metal, in mining, 204; metal, nickel sandwich layer, 204; metal, by new methods, 204; plastic coatings, 204

Springs, clock, stress/strain, 335; valve, magnetic crack detection, 437
Stainless Steel, Ar_3 point displacement by cold working, 338; Avesta, 439; cast, selenium additions, 208; casting, 324; cold-drawn austenitic, rapid softening of, 249 (*Paper*); corrosion, 212; corrosion resistance, 212; corrosion resistance in alcohol, 212; determination of silicon in, 341; developments, 335, 336; effect of cerium and lanthanum on hot workability, 208; electric-furnace practice, 104; electrode-potential testing, 208; electroplating, 110; etching medium, 440; flame cutting, 109; forming for aircraft parts, 336; high-temperature properties, 447 (*Book*); impact tests, 335; internal corrosion, 442; machining, 331; niobium-stabilized, 208; pickling sheet, 110; production from scrap, 322; production from scrap in oxygen-refining arc furnace, 426; production in vacuum furnace, 322; products standards, 336; selenium additions, 208; tantalum in, 208; transformations study by electrical resistance, 208; weld corrosion, 340; welded, internal-corrosion prevention, 212; welding electrodes for, 439; *see also* Chromium, *etc.*, Steel
Stamping, 106, 202, 327, 428; mechanized plant, 327
Stampings, brazing, 203; camera parts, 429; roof and tank parts, 429; wrinkling elimination, 107
Standardization, in Australia, 336; in Austria, 336
Statistical Analysis, in steelworks, 117
Steam, in gas cooling, 424
Steam Plant, engine castings, 200; at Margam, Abbey, and Port Talbot, 319; piping creep, 207
Steel, ageing, 113, 202, 209, 333; agricultural, layered-plate for, 335; aircraft, welding, 330; alloy. *See* Alloy Steel; austenitic, corrosion stress, 441; banding in, 440; bearing, annealing, 202; Bessemer. *See* Bessemer Steel; boron, 106, 335, 438; boron addition by reduction of boron oxide, 147 (*Paper*); capped, 320; case hardening, 326, 336, 428, 433, 439; cast. *See* Cast Steel; cerium impregnation, 111; chromium. *See* Chromium Steel; chromizing, 111, 432; clad. *See* Clad Steel; codes, 445; controlled-density, 198, 426; copper-bearing, 199, 210; continuous casting, 322; crystallization in, 105; deep-drawing quality, 320; deoxidation, 59, 104; dephosphorization by soda slags, 128 (*Paper*); determination of cerium in, 443; determination of copper in, 199; determination of copper by photometry, 443; determination of hydrogen, oxygen, and nitrogen in, 341; determination of manganese by red lead, 443; determination of molybdenum in, 443; determination of silicon in, 340; determination of titanium in, 116; determination of vanadium in, 81 (*Paper*); die, 106, 336; direct production from ore, 198, 426; Double Seven, 335; Double Six, 336; drill, 438; effects of grain-size, 432; effects of titanium, 208; effects of zirconium, 208; electric. *See* Electric Steel; En case-hardening, 336, 439; friction in, 333; galvanized, effect of annealing on resistance to atmospheric corrosion, 121 (*Paper*); gases solubility in, 208; heat transfer of water-cooled, 428; heat-resistant. *See* Heat-Resisting Steel; high-speed. *See* High-Speed Steel; hypo-eutectoid, graphite nucleation in, 59 (*Paper*); inclusions. *See* Inclusions; in industry, 118 (*Book*); killed, factors affecting surface quality, 320; manganese decrease in teeming, 320; mild. *See* Mild Steel; nickel. *See* Nickel Steel;
